

Amendments to the Specification:

Please replace paragraph [0017] with the following paragraph:

[0017] In order to provide a better overview, only the right pivot support 52 and the right wheel carrier 74, relative to the forward driving direction, are shown in Figure **[[2]] 3**; the oppositely arranged complementary elements for receiving the left rear wheel 14 are realized in mirror image fashion. A steering cylinder 68 that is linked by means of a rod 70 to a cantilevered bracket 72 connected to the hollow member 58 is arranged between the pendulum suspension 44 and the crossbeam 50. The steering cylinder 68 pivots the wheel carrier 74, relative to the pivot support 74, about the pivot axis defined by the pivot pin 66 in order to achieve steering movement of the rear wheel 12.
